

AUGUST ALEXANDER

New Rochelle, NY · aalexand@rednaxela.technology · github.com/august-alexander · linkedin.com/in/august-alexander-rednaxela

Computer science graduate and offensive security practitioner. eJPT certified, OSCP in progress. Hands-on across Active Directory attack chains, network and web exploitation, wireless/RF assessment, and ICS/OT tradecraft — built on a self-designed seven-node enterprise cyber range I both operate and attack.

CERTIFICATIONS

OSCP — in progress (challenge labs complete) **eJPT** — eLearnSecurity Junior Penetration Tester

TECHNICAL SKILLS

Offensive Security: AD attack paths (Kerberoasting, NTLM relay, RBCD, golden ticket, gMSA abuse, child-to-parent escalation), Windows/Linux privilege escalation, web exploitation, phishing payloads, pivoting and tunneling

Tooling: BloodHound, Impacket, Metasploit, Burp Suite, nmap, chisel, aircrack-ng, Kismet, Hashcat, Responder, CrackMapExec

Infrastructure & Cloud: AWS (Lambda, S3, CloudFront, EventBridge, Transit Gateway, Client VPN, IAM Identity Center SAML), Proxmox VE, Ceph, OPNsense, VLAN segmentation, LACP, PKI

Monitoring & ICS: CISA Malcolm, MISP, Grafana, Prometheus; Modbus TCP, OpenPLC, pymodbus

Development: Python, Bash, PowerShell, Flask, SQLite, SQL, Git, Linux (Kali, Debian), Windows Server

SECURITY PROJECTS

Enterprise Cyber Range — 7-Node Proxmox Cluster | 2023–Present

- Designed and operate a seven-node Supermicro cluster as a full enterprise attack lab: Ceph RBD distributed storage, LACP-bonded 10G uplinks to an Arista switch, OPNsense routing, and VLAN segmentation isolating management, storage, and VM traffic.
- Built hybrid cloud-to-lab connectivity with AWS Transit Gateway, site-to-site VPN, and Client VPN using IAM Identity Center SAML federation over a custom Easy-RSA PKI.
- Stood up an ICS/OT scenario with OpenPLC and pymodbus, then executed an unauthenticated Modbus TCP write from a cloud-hosted Kali host against a live PLC — reproducing FrostyGoop-style tradecraft end to end.
- Instrumented for blue-team visibility with CISA Malcolm, MISP, and Grafana/Prometheus dashboards across all nodes.
Stack: Proxmox VE, Ceph, OPNsense, Arista L2/L3, LACP, VLAN design, AWS (Transit Gateway, Client VPN, IAM Identity Center, EC2), Easy-RSA PKI, SAML, OpenPLC, pymodbus, Modbus TCP, Kali, Malcolm, MISP, Grafana, Prometheus

Serverless Threat Intelligence Pipeline — rednaxela.technology | 2025–Present

- Built an event-driven AWS pipeline ingesting CVE records, ransomware disclosures, and open threat intelligence, normalizing heterogeneous sources into a unified JSON schema and publishing a curated feed via S3 and CloudFront.
- Integrated the NVD API for vulnerability enrichment; operating under real cost and reliability constraints with budget controls and monitoring.
Stack: Python, AWS Lambda, EventBridge, S3, CloudFront, IAM, CloudWatch, JSON normalization, RSS, NVD API, REST integration

Wireless Site Survey & Wardriving Rig | 2025–Present

- Assembled a headless 802.11 survey platform running Kismet on a WiFi Pineapple MK7 with an MT7612U adapter for monitor-mode capture and a u-blox GPS receiver via gpsd for geotagged results.
- Managed the full operational lifecycle: radio/VAP separation to keep management interfaces out of capture, firmware management, and offline log extraction and analysis.
Stack: Kismet, WiFi Pineapple MK7 (OpenWrt), MT7612U monitor mode, 802.11 a/b/g/n/ac, aircrack-ng, gpsd, u-blox GPS, Linux CLI, SSH, headless device management

OFFENSIVE SECURITY TRAINING

- Completed OSCP Challenge Labs B and C plus the Zeus Corp, Relia, Poseidon, Laser, and feast.com multi-machine Active Directory environments — full compromise from external foothold through domain and forest-level escalation.
- Maintain a cross-linked Obsidian knowledge base of 70+ atomic reference notes spanning enumeration, privilege escalation, AD attacks, web exploitation, and pivoting, built from machine writeups and reused as an operational playbook.
- Competitor, RF Hackers Sanctuary RF CTF at DEF CON 2026. Volunteer, SummerCon 2026 and GNU Radio Conference 2024.

EDUCATION

Rollins College — B.S. Computer Science, Minor in Mathematics | Winter Park, FL | 2023

Coursework: Discrete Mathematics, Linear Algebra, Probability and Statistics, Calculus I–III
